REACH REGULATIONS

Re: Irreversible Temperature Indicating Strips

Irreversible strips and indicators are non-electronic temperature indicators. Composition varies according to range and type. They are printed laminates composed of self-adhesive films (with modified acrylic adhesives) polyester film or polyimide film (according to type), paper and various organic crystalline waxes.

As part of our on-going commitment in ensuring that we comply with all legislative requirement, we have implemented the full requirements listed under the REACH Directive.

In terms of the complete SVHC list, as updated 15th June 2015, we are happy to confirm that all the named products supplied by TMC do not contain any chemicals as listed on SVHC.

The SVHC list can be obtained at the following:

http://echa.europa.eu/chem_data/authorisation_process/candidate_list_table_en.asp

We trust that the above meets with your requirements and should you require any further clarification then please do not hesitate to contact us.

Thanking you in advance

Yours sincerely

pp Chris Chapman
